³ Net long-term capital gains and/or qualified dividends are stacked on top of other taxable income net of deductions to determine the applicable long-term capital gain rate(s). Multiple tax rates may apply since rates are progressive.

For example, assume a joint filer has net taxable income of \$100,000 which is comprised of \$80,000 of ordinary income and \$20,000 in net long-term capital gain. The first \$18,900 of the gain falls within the 0% rate threshold of \$98,900 and will be taxed at 0%; while the remaining \$1,100 of long-term capital gain is above the \$98,900 threshold and will be taxed at 15%.

Short-term capital gain rate (one year or less)	Taxed at ordinary income tax rate.
Dividends	Qualified dividends are taxed at the long-term capital gain rates. Nonqualified dividends are taxed at ordinary income tax rates.

Higher rates apply to collectibles and unrecaptured §1250 gain. Consult your tax advisor about how they apply to your situation.

Netting capital gains and losses

1. Net short-term gains and short-term losses.
2. Net long-term gains and long-term losses.
3. Net any excess short-term gains or losses (step 1), with any excess long-term gains or losses (step 2). Also known as 'netting the nets'.
4. Deduct up to \$3,000 of excess losses against ordinary income per year.
5. Carry over any remaining losses to future tax years.
